Magnesium - Superconductivity.
Magnesium diboride was first
synthesized and its structure
confirmed in 1953, but its
superconducting properties were
not discovered until 2001. Its
critical temperature (T_c) of 39 K
($\hat{\sim}234 \hat{\text{A}}^{\circ}\text{C}$; $\hat{\sim}389 \hat{\text{A}}^{\circ}\text{F}$) is the
highest amongst conventional
superconductors. Fri, 15 Jun 2018
19:49:00 GMT
diboride - Wikipedia - History.
The mineral was discovered in
the Ural Mountains of Russia by
Gustav Rose in 1839 and is
named after Russian mineralogist
Lev Perovski (1792 $\hat{\sim}$ 1856).
Perovskite's notable crystal
structure was first described by
Victor Goldschmidt in 1926, in
his work on tolerance factors.

Perovskite - Wikipedia - The
importance of magnesium ions
for all life itself, as well as for

overall vibrant health, is hard to
overstate. Every single cell in the
human body demands adequate
magnesium to function, or it will
perish. Mon, 20 Aug 2012
